SUMMARY

Product engineer at Instatus (**10M+ visits a month**). Ships products with real users: a research SaaS with **20 paying customers**, and a CRM a **10+ person firm** uses daily for **multi-million-dollar quote pipelines**.

EXPERIENCE

Full-Stack Software Engineer, Instatus

Dec 2024 – Present · 1 yr 9 mo

Status pages, incident response, on-call, and monitoring · **10M+ visits per month** · customers include **Sketch, Harvard, Siemens, and Yum! Brands**

- **Owned Instatus for Slack end to end**, from product strategy and Figma design to shipping: took it from notify-only to the full incident lifecycle in-channel (declare, post updates, change status, resolve); now live to all customers.
- **Own the Microsoft Teams integration**, hardened through team review before release: live pair-testing huddles over a Cloudflare tunnel, cookie-policy and edge-case passes, and multi-round PR review, weighing release trade-offs with teammates.
- Built the **Slack AI bot** for incident response: answers **~90% of incident questions** from channel and incident context, cutting engineers' MTTR; chain-of-thought prompting, RAG grounding, cost optimization.
- Cut incremental update payloads by **roughly an order of magnitude** by designing a deltas mechanism against a periodically refreshed base log.
- Cut storage costs by designing a **BullMQ debounce** collapsing bursts of hundreds of redundant jobs into a single downstream write.
- Reworked existing core systems (uptime calculations, incident handling), surfacing multiple latent bugs through new test coverage.

Founder & Engineer, Wholana

Mar 2026 – Present · 6 mo

Research platform for short-form video creators · **20 paying customers** · wholana.com

- Shipped **14 releases** between March and July 2026, each dated on a public changelog.
- Built the nightly ingestion and enrichment pipeline on **Temporal durable workflows**; wrote and self-hosted a TikTok scraper that **replaced the paid third-party provider**, behind an adapter seam.
- Built multi-tenant workspaces with seat-based billing, local-first reads with optimistic writes, and live multiplayer editing, supporting users and improving retention.
- **Sole operator in production**: two Hetzner boxes on Docker Swarm behind Traefik and Cloudflare, nightly R2 backups, Sentry.
- Shipped an **MCP server** (stdio and streamable HTTP) connecting a workspace to ChatGPT and other MCP clients.

Founding Engineer, Loom Cairo (later Univyr)

Jun 2023 – Oct 2025 · 2 yr 5 mo

Fashion marketplace and SaaS storefront builder · AUC Venture Lab Cycle 25 · peaked at 40,000+ unique visitors · part-time alongside Instatus from Dec 2024 · wound down without raising: the aggregator sent brands free traffic and never captured margin

- Built the entire commerce backend, **with no Shopify and no off-the-shelf e-commerce OS**: orders, payments, transactional email.
- Designed the schema for a full e-commerce OS with **ZenStack authorization across two user models**: marketplace customers and vendor organizations.
- Built a Python and Scrapy crawler ingesting **~1M items / ~4M variants across 43,000 websites in ~20 minutes per run** (Univyr, 2025); went deep on Scrapy internals (scheduler, spider, pipelines, heavy concurrency, proxy rotation).

CONTRACT & FREELANCE

- **Argonaut**, engineering and trading firm (HVAC, MEP), Jun 2025–Mar 2026: shipped a CRM handling quote/RFQ workflows for **multi-million-dollar quote pipelines**, in daily production use by a **10+ person team on 8-hour shifts**; built the marketing site, top of search for MEP-contractor and EPC-related terms in Egypt, with client-confirmed new customers.
- **UNITAR (UN agency)**, Sep–Nov 2024: built the React and TypeScript frontend of an activity-management proof-of-concept.

SKILLS

TypeScript, Python, React, Next.js · Prisma, ZenStack, Temporal, BullMQ, Postgres, pgvector, Scrapy, RociCorp Zero, Yjs, Polar · Docker Swarm, Traefik, Hetzner, Cloudflare R2, AWS, Sentry · prompt engineering, RAG, LLM cost optimization · Figma, design systems.

EDUCATION & EARLIER

BSc Electronics & Communications Engineering, Misr International University, 2018–2023 · Software Engineering Instructor, ITI (2023) · English (C2, bilingual), Arabic (native), French (B1).
